### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mike Marion on 6/29/07.

In claim 8, line 6, "the Curic temperature" is changed to --the Curie temperature--.

Rewrite claim 9 as follows:

An arrangement for the heating of magnetic particles which are present in a target region, the arrangement comprising

- a) means for generating a magnetic field whose magnetic field strength varies in space in such a manner that a first sub-region (301) having a low magnetic field strength and a second sub-region (302) having a higher magnetic field strength are formed in the target region,
- b) means for changing the position in space of the two sub-regions in the target region in a nonrotational manner for so long and at such a frequency that the target region is heated.

### *Allowable Subject Matter*

Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art does not teach or suggest the use of the invention as claimed.

Art Unit: 3739

Regarding independent claims 1 and 9, the prior art fails to teach a method comprising changing the position in space of a first sub-region with low magnetic field strength and a second sub-region with a higher magnetic field strength in a target region in a nonrotational manner so that the target region heats up. Boddie, Jr. et al. (US 4674481) teaches the use of magnetic fields to heat a target region, but fails to teach the changing in position in space of two sub-regions. Kraus, Jr. et al. (US 6470220 B1), teaches the heating of magnetic particles in a target region using by changing the position in space of a first sub-region with low magnetic field strength and a second sub-region with a higher magnetic field strength in the target region, but fails to teach the changing of the positions of the sub-regions as being in a nonrotational manner. Gray et al. (US 6167313) and Handy et al. (US 6997863 B2) teach the heating of magnetic particles in a target region using magnetic field, but fail to teach magnetic field sub-regions being changed in their position in space for heating.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
